

## LIGHTING SYSTEMS FOR IN-LOADER

### Impact resistant tail lights - long life-time

Lighting for in-loader is often placed vertically in the chassis for optimum protection of the tail lights.

For this purpose Ermax produces the TM10 tail light with rectangular reflex reflector, meaning that the light can be build-in vertically and with the AMP plug at the rear of the house. Warning triangle will be mounted separately. The tail light is available as Hybrid or full-LED version.

In order to increase the life-time, the lens of this tail light is made of impact-resistant material – polycarbonate.

TM10 Tail light vertically built-in.
